

Massey Concave Setups

Easy Thresh for gentle thresh

SBM0910

Designed to gently thresh crops that are difficult to harvest, minimizing grain damage while effectively separating the grain from the plant material

Max Thresh For difficult to thresh

SBM0914

A specific design of concave bars or inserts positioned at the front of the concave, designed to maximize threshing efficiency by providing aggressive grain separation with smaller holes

Hard Thresh For aggressive thresh

SMB0912

A concave configuration explicitly designed for crops that are difficult to thresh, meaning they require more aggressive action to separate the grain from the chaff,
